New Traffic Panel Van offers flexibility and practicality

The new Traffic range is the cornerstone of Renault's commercial vehicle range. Now offering both Panel Vans and Passenger Carrying versions, the new Traffic range offers the right variant for you - whatever your requirements.

The New Traffic Panel Van offers flexibility and practicality thanks to a choice of two wheelbase lengths and two roof heights. The New Traffic Crew Van can comfortably and safely accommodate 6 people and their luggage, or your workforce and equipment and offers a new set of standards in passenger carrying design, comfort and refinement.

The Renault Traffic fits into Renaults van range above the Kangoo and below the Master in size.

As with the Master the Traffic has gone under recent revisions in styling, equipment and the latest Euro IV engines.

The latest Traffic model revised in December 2006 features a re-designed front end using one-piece headlamp units with built-in indicators and a

Now offering both Panel Vans and Passenger Carrying versions, the new Traffic range offers the right variant for you - whatever your requirements

restyled radiator grille moving the Renault badge as they described to me inwards. At the rear, there are revised lamp units and a useful footplate for added practicality. Inside there has been an improvement in

quality, especially around the new dashboard.

As well as some new clever ideas like shelves below the instrument panel and a refrigerated glove box that is linked to the air to keep those drinks cold

in the summer. Height adjustable steering wheel makes for a comfy ride. Equipment levels have been improved where even the basic Traffic models get features like a 30W single-CD RDS radio, ABS with EBD

(electronic brake distribution), remote central locking with deadlocking and an insurance approved (category 1) alarm and immobiliser.

A maximum payload of up to 1.2 tonnes it's easy to load

with wide opening doors for easy access. The wide model choice remains between two wheelbases - short 3098mm and long 3498mm, two roof heights - short 1.96m and high 2.50m and three body types: panel van, commercial passenger vehicle with 9 seats and platform cab.

There's also a popular six-seat Traffic Crew Van variant, offered in both short and long wheelbase versions of the low roof models, with a load area of up to 4m². The engine line-up sees the introduction of Euro 4 standards bringing two versions of the latest 2.0 dCi diesel engine developing either 90 or 115bhp.

Next step up is the 2.5 dCi engine with 150bhp. All these engines come with a six-speed manual gearbox but if you go for the 115 or 150bhp models you can have the option of a six-speed semi-automatic Quickshift6 transmission.

For petrol lovers Renault also still offer a 2.0 16V petrol derivative with 120bhp which also meets Euro 4 standards.
